EDUCATION

Georgia Institute of Technology

M.S. in Computer Science

Atlanta, Georgia

Expected Aug 2026

- o **Specialization:** Artificial Intelligence

Georgia State University

B.S. in Computer Science

Atlanta, Georgia

Graduated May 2025

- o **GPA:** 3.80/4.00, President's List & Dean's List
- o **Related Coursework:** Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Operating Systems, Software Engineering & Development, Computer Organization & Programming, Web Programming, Statistics

EXPERIENCE

CirrusLabs

Software Engineering Intern

Alpharetta, Georgia

May 2025 – Dec 2025

- Built a full-stack CRM web application by integrating React components with Django REST backend APIs, collaborating cross-functionally with developers to ensure seamless data flow between frontend interfaces and server-side services.
- Streamlined development workflows by managing version control, code reviews, and pull requests via GitHub in an Agile/SDLC-driven environment, ensuring consistent and efficient integration of frontend, backend, and API changes.
- Engineered a voice-enabled deal creation feature by integrating Google Speech-to-Text with GPT-4 NLP, enabling hands-free natural language input that streamlined deal registration and improved CRM accessibility.
- Designed and managed PostgreSQL database schemas for core CRM data models by writing and optimizing SQL queries to support efficient data retrieval and storage across Contacts, Companies, and Deals modules.
- Designed responsive and intuitive interfaces across 3 core CRM modules (Contacts, Companies, Deals) by building consistent layouts and user workflows in Figma, improving usability and supporting smooth frontend implementation.

PROJECTS

AI-Powered Research Agent

Personal Project

Atlanta, Georgia

April 2026

- Built a multi-agent autonomous research system in Python by orchestrating five specialized LangGraph agents (Planner, Researcher, Critic, Synthesizer, Writer) to autonomously plan, search the web, synthesize structured reports.
- Engineered a self-correcting critic loop using LangChain and the Tavily API by scoring research quality from 0.0 to 1.0 and triggering follow-up searches when below a 0.9 threshold, ensuring high-quality report generation.
- Implemented dynamic conditional graph routing in LangGraph by designing state schemas and edge logic to control agent transitions and loop iterations, enabling flexible and self-correcting research pipeline execution at runtime.

Home Loan Data Analysis & Prediction

Personal Project

Atlanta, Georgia

Jan 2026

- Built an end-to-end machine learning pipeline in Python by performing data ingestion, preprocessing, feature encoding, and class weight balancing on historical home loan data, enabling model training across 228 features.
- Designed and trained a deep neural network using TensorFlow/Keras with a 128-64-32 neuron layer architecture by implementing dropout regularization and early stopping callbacks to prevent overfitting and optimize training.
- Validated model performance on unseen test data by evaluating precision, recall, F1-score, and AUC metrics through confusion matrices and classification reports, confirming 92%+ scores across all key classification metrics.

Weather App

Team Lead

Atlanta, Georgia

April 2025 – May 2025

- Developed a Flutter weather app by integrating OpenWeatherMap API to deliver real-time forecasts & radar overlays.
- Architected a user system using Firebase Authentication & Cloud Firestore, enabling secure login & cross-device sync.

SKILLS

Certifications: Oracle Java Certified Foundations Associate, AWS Certified AI Practitioner*

Programming: Java, Python, JavaScript, SQL, React.js, Go, Django, C, Dart, HTML/CSS, PHP, TypeScript, Assembly

Tools: Visual Studio Code, Git, AWS, Jupyter Notebooks, TensorFlow, LangChain, Flutter, Firebase, Android Studio, Figma
